Summary

Game Programmer based in London, First Class Honours from the University of Greenwich. Builds gameplay mechanics and systems across Unreal and Unity, spanning companion AI and puzzle logic, networked multiplayer, and XR training research. Over a decade in professional kitchens beforehand, leading teams under pressure and delivering consistently under shifting, time-critical conditions.

Technical Skills

Program Languages: C++, C#, HLSL

Game Engines: Unreal Engine, Unity

DevOps Tools: GitHub, GitKraken, Azure DevOps

Others: HTML, CSS, PHP, JavaScript, MS Office

Education

University of Greenwich

London, UK

BSc (Hons) in Games Design and Development - Specialisation: Game Programming — *Sep 2023 - Jun 2026*

Outcome: First Class Honours

Istituto Tecnico Industriale Statale "Oreste del Prete"

Sava, Italy

Computer Science — *Sep 2006 - Jul 2011*

Main modules: Mathematics, Statistics, IT, Electronics

Projects

Final Year Project - Dissertation

Assessing the Effectiveness of Extended Reality Simulation Training for Learning a Physical Skill — *2026*

- Built a custom mixed reality training tool in Unity for Meta Quest 3, paired with a physical Arduino Mega 2560 FSR-based target rig to measure real-world skill transfer.
- Ran a pre/post-test study with 20 participants and identified a conditional negative transfer effect, where high in-headset accuracy did not reliably predict physical skill improvement.
- Isolated ballistic-profile mismatch as a key factor limiting transfer between virtual and physical performance.

Unity - Netcode for GameObjects & XR Interaction Toolkit

Relay - VR Multiplayer Escape Room — *2026*

- 5-day team project (group of 5) building a multiplayer VR escape room on Meta Quest 3 using Unity's VR Multiplayer Template.
- Implemented client-server networking: client actions triggered RPCs to the server, which wrote NetworkVariables to synchronise state changes across all connected clients.
- Collaborated on puzzle design and multiplayer session flow within a 5-person team.

Unreal Engine (Blueprints) - Game & Systems Design

Echoes Of Alchemy — *2024 - 2025*

- Designed a companion AI (using Unreal's navmesh system) that assists with resource gathering and puzzle-solving, gating select puzzle solutions behind companion-specific abilities to require player-companion coordination.
- Implemented physics-driven puzzle mechanisms, including a raycast-based system that detects player position and orientation to let environmental doors open contextually, alongside pressure-plate and weight-based mechanisms.
- Ran two structured playtesting rounds and iterated based on direct feedback, cutting a run mechanic that disrupted pacing and refining companion navigation and collision handling.

Work Experience

University of Greenwich
London, UK

Research Assistant
Apr 2026 - present

- **VR Training Development:** Developing a stationary VR hazard training environment for Meta Quest 3, extending dissertation research on XR-based skill acquisition into an applied training tool.

University of Greenwich
London, UK

Information Technology Service Desk
Oct 2024 - present

- **Technical Troubleshooting and Support:** Assisted throughout the day with queries of students and lecturers.

University of Greenwich
London, UK

Student Ambassador
Oct 2023 - present

- **Customer-Oriented Communication:** Escorted potential new students around the University, answering questions and keeping conversation lively.

Hospitality Industry
London, UK

Sous Chef, Chef de Partie & Commis Chef
Aug 2011 - Sep 2023

- **Leadership & Team Coordination:** Led kitchen sections and deputised for the Head Chef, directing teams through high-pressure, time-critical service.
- **Process & Quality Control:** Maintained consistent quality and timing standards across concurrent, interdependent workflows, comparable to coordinating a production pipeline.
- **Adaptability Under Pressure:** Built strong prioritisation and problem-solving instincts responding to constantly shifting, high-stakes conditions.

Awards

National

2026 **TIGA Outstanding Graduate of the Year Finalist - Production/Enterprise**, TIGA UK Games Education Awards — *UK*

2026 **BIMA 100 Class of 2026 - Student Category**, British Interactive Media Association (BIMA) — *London, UK*

University

University of Greenwich SharkExpo, London, UK

2024 **Named One of the Best Projects**
Potato Bonanza Extravaganza (Group)
Reign Of Elements (Individual)

2025 **Named One of the Best Projects**
Echoes Of Alchemy (Individual)
The Bizarre Gramophone (Group)

2026 **Named One of the Best Projects**
Final Year Project: MR Training Simulator (Individual)
Relay: VR Multiplayer Escape Room (Group)
Audio-Reactive Shaders (Individual)

University of Greenwich, School of Computing and Mathematical Sciences, London, UK

2026 **Making a Difference Award - for support to the Games Development programme in outreach, events, and student representation**
